Title: Artemis on track to break record set by Apollo 13 during lunar flyby

URL: https://winnipeg.citynews.ca/2026/04/06/artemis-on-track-to-break-record-set-by-apollo-13-during-lunar-flyby/

Content: By The Canadian Press

Posted April 6, 2026 3:00 am.

The Artemis II mission is expected to complete a record-breaking lunar flyby today.

The Canadian Space Agency says astronaut Jeremy Hansen and his three American crewmates are set to become the space explorers who will have ventured farther into space than anyone before, surpassing a record set by Apollo 13 in 1970.

NASA says the estimated maximum distance from Earth during today's flyby by the Orion spacecraft will exceed 406,000 kilometres, beating the 400,171 kilometres set by Apollo 13.

When Orion passes behind the moon, the spacecraft will enter a communications blackout of about 40 minutes as the lunar surface blocks radio signals. [...] Adjust preferences

Artemis on track to break record set by Apollo 13 during lunar flyby

By The Canadian Press

Posted April 6, 2026 3:00 am. […] Artemis II's astronauts are following the same figure-eight path since they are neither orbiting the moon nor landing on it.

The capsule will aim for a splashdown in the Pacific near San Diego on April 10, nine days after its Florida launch.

This report by The Canadian Press was first published April 6, 2026.

RELEASE 26-028

NASA Headquarters [...] “At NASA, we dare to reach higher, explore farther, and achieve the impossible. That’s embodied perfectly by our Artemis II astronauts – Reid, Victor, Christina, and Jeremy. They are charting new frontiers for all humanity,” said Dr. Lori Glaze, acting associate administrator for Exploration Systems Development Mission Directorate at NASA Headquarters in Washington. “Their dedication is about more than breaking records – it’s fueling our hope for a bold future. Their mission is carrying our promise to return to the Moon’s surface, this time to stay as we establish a Moon Base.”

2026-04-04T04:22:15.936Z

The four astronauts of NASA's Artemis 2 mission just notched a major milestone: They're closer to the moon than they are to Earth.

Jacki Mahaffey, a Capsule Communicator (CAPCOM) at Johnson Space Center in Houston, radioed the news to the quartet around midnight EDT (0400 GMT) on Saturday morning (April 4).

. On Monday (April 6), they will loop around the far side of the moon, getting farther from Earth than any humans ever have. They'll then head back to their home planet, arriving on April 10.

The quartet spent this evening setting up the equipment they'll need for the April 6 flyby. Hansen and Glover got a workout in, and all four spent some time looking out Orion's window, taking in the amazing views.

URL: https://www.discovermagazine.com/artemis-ii-crew-breaks-record-for-farthest-human-spaceflight-while-gazing-upon-the-moon-s-far-side-48927

Content: ## Setting a Human Spaceflight Record

Artemis II officially broke the record for the farthest distance traveled by a human spaceflight mission at 1:56 p.m. ET on Flight Day 6 (Monday, April 6, 2026), when the spacecraft reached its maximum distance from Earth at 252,756 miles. At this time, the spacecraft made its closest approach to the Moon, getting as close as about 4,067 miles above its surface.

The new maximum distance achievement surpasses the previous record — a distance of 248,655 miles from Earth — set by the Apollo 13 mission in 1970.

Craters on the Moon, and a Solar Eclipse [...] ## Craters on the Moon, and a Solar Eclipse

The rest of Flight Day 6 was just as eventful for Hansen and NASA astronauts Victor Glover, Reid Wiseman, and Christina Koch.

Shortly after 2 p.m. ET, they described two unnamed craters that they had spotted near Orientale basin, a nearly 600-mile-wide surface feature first observed on Flight Day 5 (Sunday, April 5, 2026), according to NASA. [...] ## Views From the Far Side

As the Artemis II crew looped around the Moon, features of the lunar far side came into view. They took note of Hertzsprung basin, a nearly 400-mile-wide far side crater that's

much older than Orientale basin and has been hit by more impacts over time. Comparing observations of these two basins will help scientists understand how lunar features evolve over geologic timescales, according to NASA.

With its lunar observation period completed, Artemis II is headed back home, having left the lunar sphere of influence at about 1:23 p.m. ET on Flight Day 7 (Tuesday, April 7, 2026). Everyone on Earth now awaits their return on Friday, April 10, when the crew is anticipated to splash down off the coast of San Diego at around 8:07 p.m. ET.

"Such a majestic view out here," Wiseman radioed once he regained his composure and started taking pictures. The astronauts called down that they managed to capture the

moon and Earth in the same shot, and provided a running commentary to scientists back in Houston on what they were seeing.

Lunar flyby

Later on Monday, during the hours-long flyby, Artemis II will temporarily lose contact with Mission Control as the capsule passes behind the moon without stopping. [...] ## Poignant moment

Moments after breaking Apollo 13's record, the astronauts asked permission to name two fresh lunar craters already observed. They proposed Integrity, their capsule's name, and Carroll in honor of Wiseman's wife, who died of cancer in 2020.

"A number of years ago, we started this journey in our close-knit astronaut family, and we lost a loved one," Hansen said. "And there's a, there's a feature in a really neat place on the moon."

Hansen continued: "It's a bright spot on the moon. And we would like to call it Carroll."

Wiseman wept as Hansen put in the request to Mission Control, and all four astronauts embraced in tears.
